- Questions
- Conclusion
- Features
- Drupal API
- Drush
- Installation profiles
- The Plus

Questions: What is stored where?

Filesystem:

- Code
- Code Settings

Database:

- Drupal Settings
- Modules Settings
- Content Types
- Content
- Views
- Rules
- ...

Questions: What is exportable* right now?

Filesystem:

- Code
- Code Settings

*(and importable)

Database:

- ~~Drupal Settings~~
- ~~Modules Settings~~
- Content Types
- ~~Content~~
- Views
- Rules
- ...

Questions . . .

Questions: How to cooperate with a team^{*}?

- Working together on live?

Questions: How to cooperate with a team*?

- Working together on live?
- Working with ftp?

Questions: How to cooperate with a team^{*}?

- Working together on live?
- Working with ftp?
- Sharing sqldumps?

Questions: How to cooperate with a team^{*}?

- Working together on live?
- Working with ftp?
- Sharing sqldumps?
- Overwriting others' work?

*(Perhaps a distributed team)

Questions: How to handle the staging issue?

Everything works on dev. Now what?

Questions: How to handle the staging issue?

Everything works on dev. Now what?

- Install modules again on stage

Questions: How to handle the staging issue?

Everything works on dev. Now what?

- Install modules again on stage
- Export Views, Rules, CT's manually from dev*

* Also possible via code for Rules[1] and Views[2]

Questions: How to handle the staging issue?

Everything works on dev. Now what?

- Install modules again on stage
- Export Views, Rules, CT's manually from dev*
- Import them manually into stage

Questions: How to handle the staging issue?

Whats about the „unexportable“ functionality?

Questions: How to handle the staging issue?

Whats about the „unexportable“ functionality?

Reproduce manually!

Questions: How to handle the staging issue?

Whats about the „unexportable“ functionality?

Reproduce manually:

- Module Settings / Configuration

Questions: How to handle the staging issue?

Whats about the „unexportable“ functionality?

Reproduce manually:

- Module Settings / Configuration
- Roles and its Permissions

Questions: How to handle the staging issue?

Whats about the „unexportable“ functionality?

Reproduce manually:

- Module Settings / Configuration
- Roles and its Permissions
- And so on...

Questions: How to handle the staging issue?

Whats about the „unexportable“ functionality?

Reproduce manually:

- Module Settings / Configuration
- Roles and its Permissions
- And so on...
- Ooops, i forgot the live environment, repeat....

Conclusion

Conclusion

- Not a good strategy for a team...

Conclusion

- Not a good strategy for a team...
- No granularity...

Conclusion

- Not a good strategy for a team...
- No granularity...
- Mostly cumbersome work...

Conclusion

- Not a good strategy for a team...
- No granularity...
- Mostly cumbersome work...
- Hard to use repeating patterns...

Conclusion

- Not a good strategy for a team...
- No granularity...
- Mostly cumbersome work...
- Hard to use repeating patterns...
- Prone to errors...

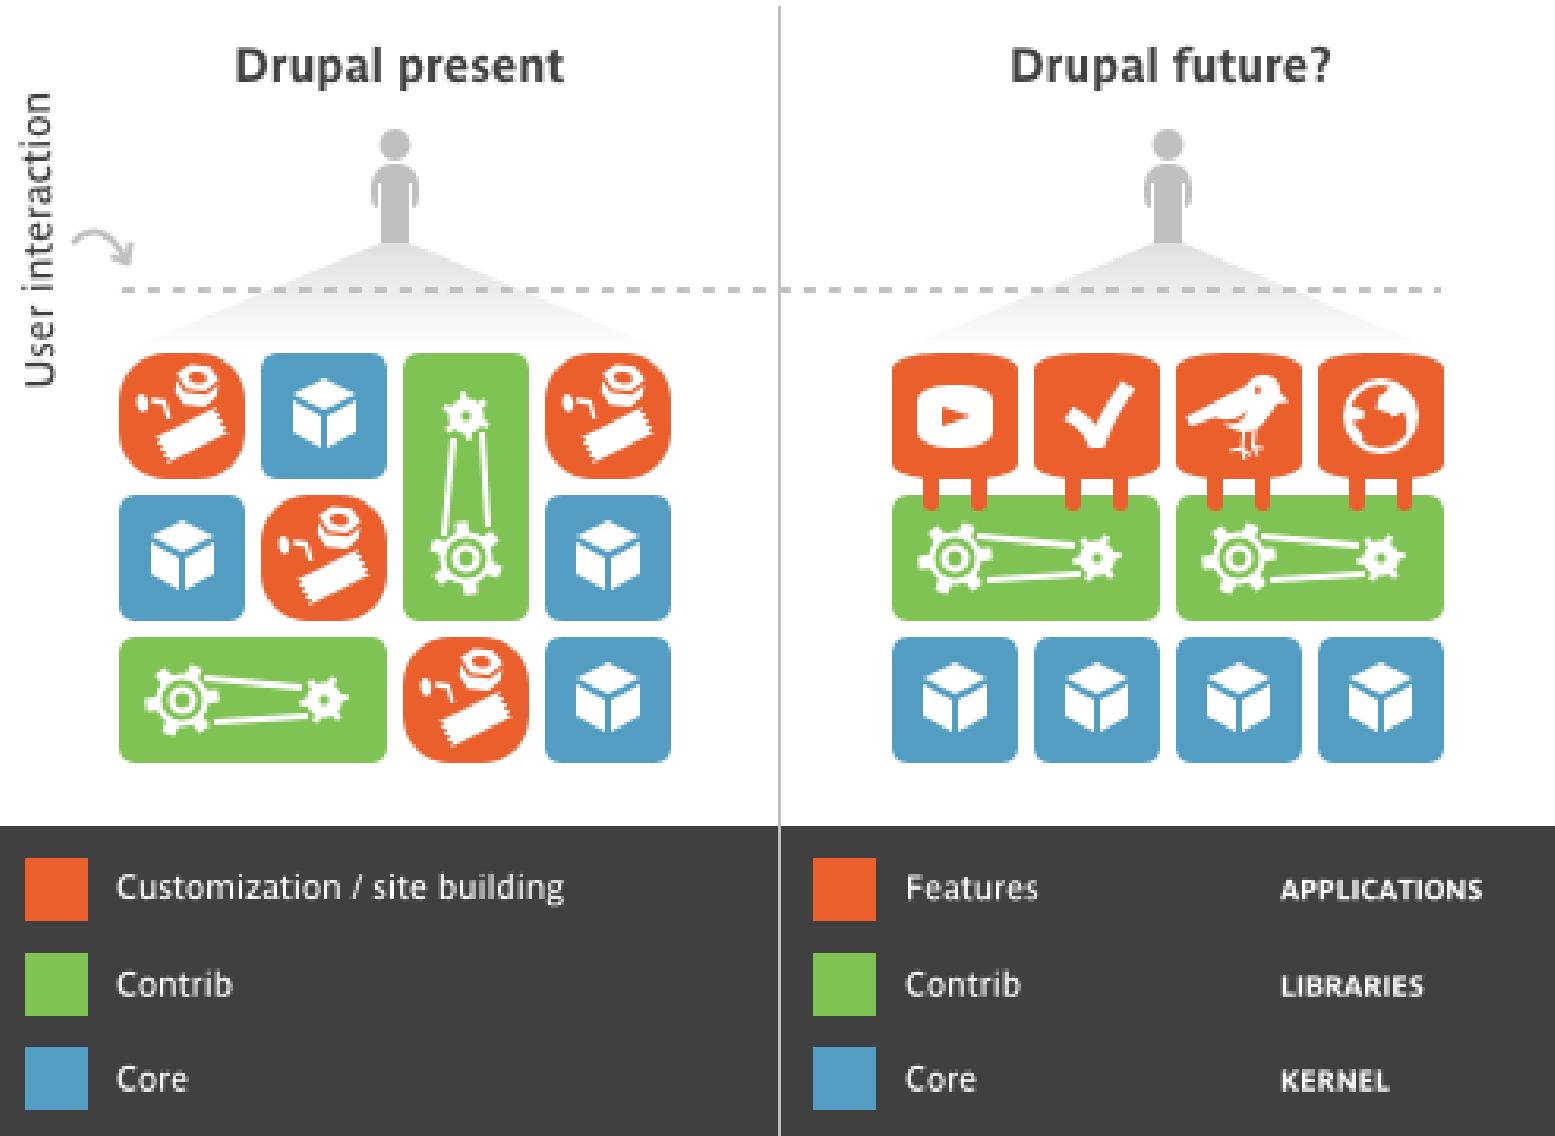

Conclusion

- Not a good strategy for a team...
- No granularity...
- Mostly cumbersome work...
- Hard to use repeating patterns...
- Prone to errors...
- No revision history...

Conclusion

- Not a good strategy for a team...
- No granularity...
- Mostly cumbersome work...
- Hard to use repeating patterns...
- Prone to errors...
- No revision history...
- No VCS / SCM...

features

features: The Features Module

Features

<http://drupal.org/project/features>

Requires ctools

<http://drupal.org/project/ctools>

- Uses the ctools export API
- Export functionality and configuration into code
- Code means Drupal Module

features: What can it handle?

Drupal Core:

- CCK Fields
- CCK Fieldgroups
- Content Types
- Dependencies (required modules)
- Menus and Menu links*
- Permissions
- Roles
- Taxonomy (Vocabularies)*

* Currently in development.

features: What can it handle?

Contributed Modules:

- Context
- CKEditor Profiles
- Feeds
- Flags (from 6.x-2.x)
- ImageCache
- Panels
(Page Manager)
- Rules
- Views

features: What is missing?

- Configuration
- Custom Blocks
- Input Formats
- Content

features: Rule #35?

Rule #35: "There's a Drupal module for that." [3]

features: Rule #35 – Configuration

Strongarm

<http://drupal.org/project/strongarm>

- Settings are usually stored in {variables}
- Strongarm makes variables exportable via features
- Uses the ctools export API

features: Rule #35 – Boxes

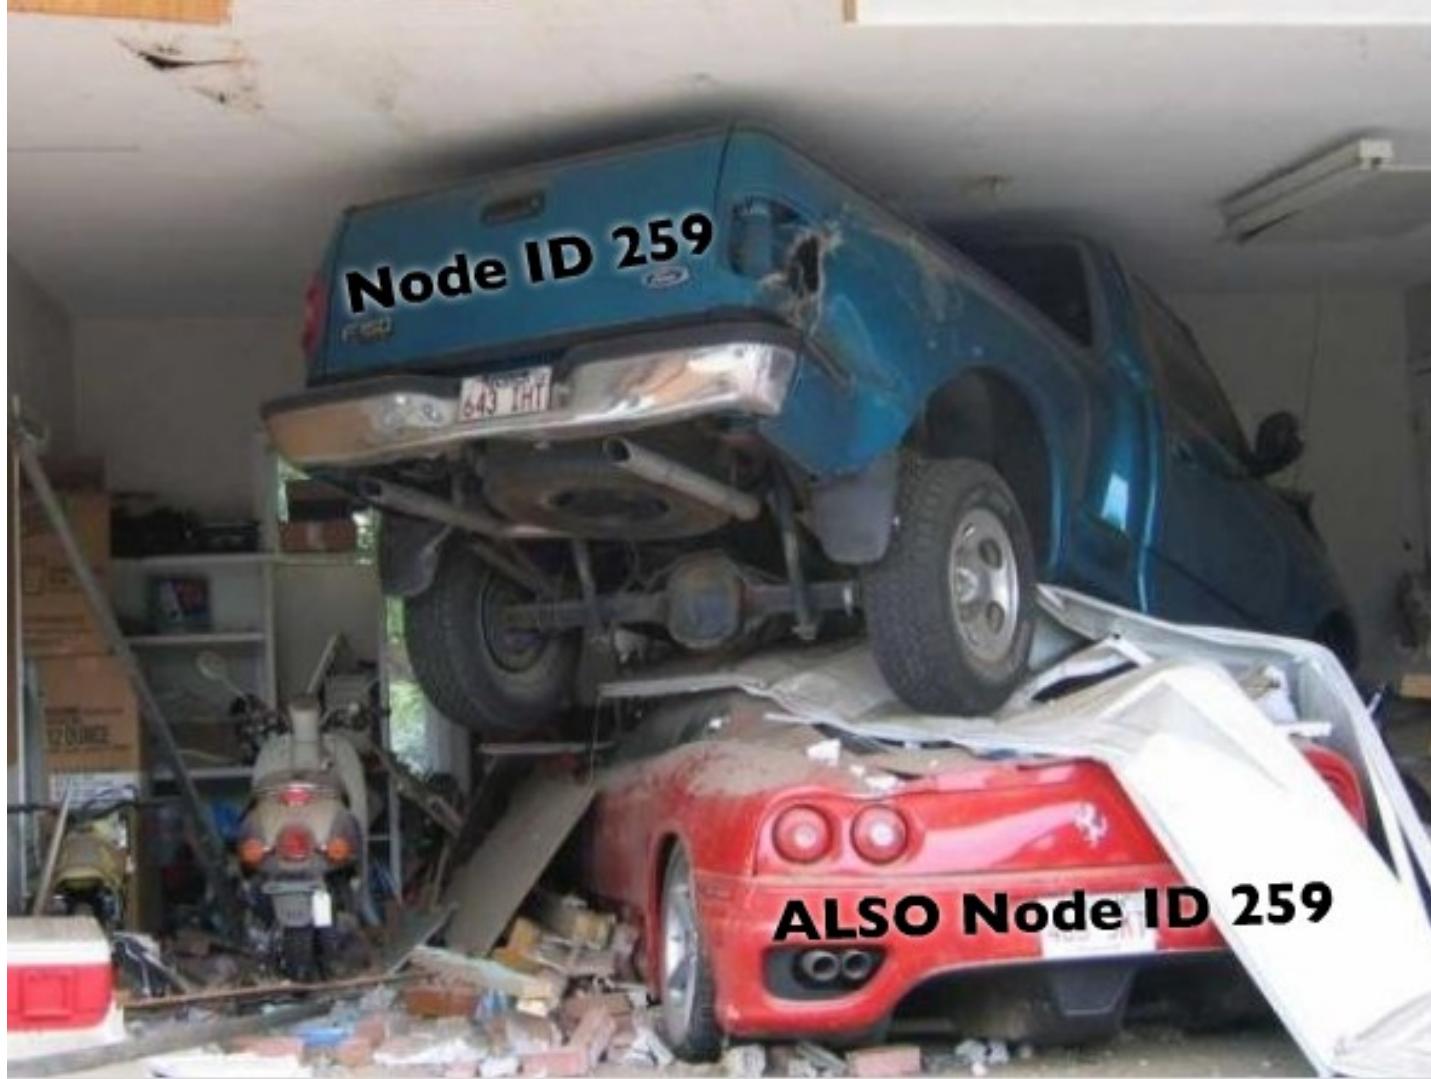

Boxes

<http://drupal.org/project/boxes>

- A reimplementation
of custom blocks (boxes)
- Uses the ctools export API

features: Rule #35 – Content

features: Rule #35 – Content

Nodes, Node revisions, User, Taxonomy

http://drupal.org/project/uuid_features

- Requires uuid
→ Universally Unique Identifier
<http://drupal.org/project/uuid>
- e.g. node/259 gets the following uuid:
f3159efc-3e1c-102e-882c-fd9c148d8804

Features: Rule #35 - import formats

Input Formats

http://drupal.org/project/input_formats

- Allows you to export / import Input Formats manually like CT's and Views
- Features Module Integration
- Requires Exportables
<http://drupal.org/project/exportables>
- Requires Strongarm and Ctools, too

features: myfeature

A Profile CT with...

- content_profile
- cck_private_fields
- flag_friend, flag_friend_access
- content_taxonomy
- And a lot of fields...

features: myfeature

```
myfeature/
└── myfeature.features.content.inc
    ├── myfeature.features.fieldgroup.inc
    ├── myfeature.features.inc
    ├── myfeature.info
    ├── myfeature.module
    └── myfeature.strongarm.inc
```

Features: myfeature.info

```
core = "6.x"
dependencies[] = "cck_private_fields"

name = "myfeature"
package = "Features"
```

features: myfeature.module

```
<?php  
include_once('myfeature.features.inc');
```

Features: myfeature.features.inc (1)

```
<?php

/**
 * Implementation of hook_ctools_plugin_api().
 */
function myfeature_ctools_plugin_api() {
  list($module, $api) = func_get_args();
  if ($module == "strongarm" && $api == "strongarm") {
    return array("version" => 1);
  }
}
```

Features: myfeature.features.inc (2)

```
/**
 * Implementation of hook_node_info().
 */
function myfeature_node_info() {
  $items = array(
    'profile' => array(
      'name' => t('Profile'),
      'module' => 'features',
      'description' => t('A user profile built as content.'),
      'has_title' => '1',
      'title_label' => t('Title'),
      'has_body' => '0',
      'body_label' => '',
      'min_word_count' => '0',
      'help' => '',
    ),
  );
  return $items;
}
```

Features: myfeature.features.inc

```
<?php

/**
 * Implementation of hook_ctools_plugin_api().
 */
function myfeature_ctools_plugin_api() {
  list($module, $api) = func_get_args();
  if ($module == "strongarm" && $api == "strongarm") {
    return array("version" => 1);
  }
}
```

features: myfeature.features.content.inc

```
<?php

/**
 * Implementation of hook_content_default_fields().
 */
function myfeature_content_default_fields() {
  $fields = array();
  ...
  // Exported field: field_relationship_status
  $fields['profile-field_relationship_status'] = array(
    'field_name' => 'relationship_status',
    'type_name' => 'profile',
    'display_settings' => array(
      'weight' => '37',
      'parent' => 'group_common',
      'label' => array(
        'format' => 'above',
      ),
      ...
      'allowed_values' => 'solo^M
In a relationship^M
complicated',
      ...
      'label' => 'relationship status',
    );
  }
}
```

features: Specifications

Kit [4]

- KIT Feature Specification (kitf 1.0-draft)
- KIT Theme Specification (kitt 1.0-draft)

features: Known Issues

Lost in translation [5]...

- e.g. a field is named 'Beziehungsstatus'
- e.g. in your myfeature.content.inc you will get: t('Beziehungsstatus') that will be used as translation source
- but it should be t('relationship status')
- Still an open issue in Features Module [6]
- Solution: Features Export Language [7]

Drupal API: If a feature is not enough...

You know, Drupal has an API...

Create Upgrade-Path's with Drupal's update.php

- Create myfeature.install file
- Implement hook_install()
http://api.drupal.org/api/drupal/developer--hooks--install.php/function/hook_install/6
- Implement hook_update_N()
http://api.drupal.org/api/drupal/developer--hooks--install.php/function/hook_update_N/6

Perhaps you might use db_query()
or implement hook_you_name_it()

drush

drush fu

Features Module provides some drush commands:

- drush features
- drush features-export [feature name]
[component list]
- drush features-update [feature name]
- drush features-revert [feature name]
- drush features-diff [feature name]

drush: Useful features related extensions

- Features Clone
http://drupal.org/project/features_clone
- Features Plumber
http://drupal.org/project/features_plumber
- Features Fetch
http://drupal.org/project/features_fetch

Installation profiles

You might know Installation Profiles from...

- DrupalCenter
- OpenAtrium
- Acquia Drupal
- Commons
- Open Publish
- ...

Installation Profiles: myprofile

```
drupal-6.x/
├── COPYRIGHT.txt
├── cron.php
